We have come a long way since the Trust’s creation, and have launched two far-reaching programmes. One seeks to prevent blindness and strengthen eye health care; and the other supports youth leadership.

We have set ourselves a five-year target to achieve our goals for both programmes, and are confident that – within that time frame – we will make a substantial difference to the lives and livelihoods of citizens across the Commonwealth.

It is also our intention to lay solid foundations on which the governments and people with whom we work can continue to build for many generations to come.

I am honoured to serve as Chairman of the Trust, and enormously grateful to the partners and donors who make our work possible. Our wish is to ensure a strong and healthy future for all Commonwealth citizens, thus creating a meaningful and enduring tribute to Her Majesty The Queen’s sixty years of devotion as its Head.
BEGINNINGS

In Perth in October 2011, as preparations were underway across the Commonwealth to commemorate Her Majesty The Queen’s Diamond Jubilee, Commonwealth Heads of Government welcomed and pledged their support for the establishment of The Queen Elizabeth Diamond Jubilee Trust.

As a new grant-making foundation, its aim would be to support charitable projects and organisations throughout the Commonwealth, to leave a lasting legacy in tribute to The Queen.

By mid-2012, the Trust was operational and programme planning was in full swing. Our work was set to focus on two agreed goals over the next five years: the empowerment of a new generation of young leaders and the prevention of avoidable blindness.

Commonwealth Heads of Government formally endorsed these goals when they met again in Sri Lanka in 2013. By this time, almost £100 million had been raised to support our charitable work, thanks to pledges from individuals, organisations, businesses and governments from every region of the Commonwealth.

In 2014, both The Queen’s Young Leaders Programme and initiatives under our Avoidable Blindness Programme were formally launched.

I should like to take this opportunity of extending Her Majesty’s sincere thanks for this remarkable initiative which has been founded as a tribute to her sixty years of service as Head of the Commonwealth.

Throughout sixty years of dedicated service and leadership as Head of the Commonwealth, The Queen has shown personal and unwavering commitment to all that the Commonwealth represents and holds dear – especially our shared values of democracy, development and diversity.

Kamlesh Sharma, Commonwealth Secretary General, Trustee of The Queen Elizabeth Diamond Jubilee Trust
OUR APPROACH

With a five-year time frame in which to deliver successful programmes, our aim is to leave a lasting legacy, owned by the whole Commonwealth, in honour of Her Majesty The Queen.

Through grants, advocacy and convening, we are working with partners to create sustainable improvements to the lives of Commonwealth citizens, in line with Commonwealth priorities.

Our focus is on the empowerment of a new generation of Commonwealth leaders, and the ending of avoidable blindness.

HOW WE WORK

1. NATIONAL LEADERSHIP

Our programmes are determined and shaped by the governments and citizens in the Commonwealth countries where we operate.

2. RESULTS

We are tackling areas of need where we know we can make a clear, measurable difference within five years.

3. PARTNERSHIP

We work in alliance with governments, NGOs, civil society and businesses to deliver our programmes and to help build momentum where change is needed.

4. EFFICIENT

We and our partners are applying cost-effective and tested approaches that we know can bring benefit to the Commonwealth’s citizens.

5. INNOVATION

We support partners to develop new, pioneering technology and tools which can benefit the Commonwealth as a whole.

6. KNOWLEDGE

We fund education, training and research to enhance local expertise and knowledge in the countries where we work.

7. SYSTEMS

We work with governments to strengthen health systems so that changes will benefit everyone for generations to come.

8. MAGNIFYING IMPACT

Through advocacy and convening, we seek to encourage changes in policy and practice that improve the lives of young people and end avoidable blindness.
WHERE WE WORK

- Empowering Young Leaders
- Eliminating Blinding Trachoma
- Tackling Diabetic Retinopathy
- Tackling Retinopathy of Prematurity

EMPOWERING YOUNG LEADERS

- Hosting Clinical Fellows or Providing Scholarships
- Eligible for Commonwealth Eye Health Consortium Programmes
- Individuals participating in the Commonwealth Eye Health Consortium

12
Through awards and grants, The Queen’s Young Leaders Programme is discovering, supporting and celebrating young people from across the Commonwealth, to help them transform their lives and the lives of others around them. It is being run in partnership with Comic Relief and The Royal Commonwealth Society.

In July 2014, in the presence of Their Royal Highnesses The Duke of Cambridge and Prince Harry, we launched the Queen’s Young Leaders Programme at Buckingham Palace, and began the search for the Commonwealth’s first ever Queen’s Young Leaders.

Each year for four years, 60 exceptional young people aged 18-29 from all over the Commonwealth will receive a Queen’s Young Leaders Award to recognise the lead they are taking in their communities to change lives. Award winners receive training and mentoring from the University of Cambridge Institute of Continuing Education, networking opportunities, and the chance to participate in a unique residential programme in the UK where they will receive their Award from Her Majesty The Queen.

From 2015, we will also start awarding grants to eligible organisations in selected countries from every region of the Commonwealth that are working with young people to transform their lives. The grants will support projects that place young people at the heart of their communities, addressing issues such as training, employment and leadership.

Our vision

A Commonwealth where the lives of its citizens are enriched by the talent, skills and energy that young people bring, and where young people are given the opportunities to secure sustainable employment. We want to see young people have a genuine say in the decisions that affect them as individuals, as well as in their communities and society at a local, national and international level.
Youth Leadership grants will be made in six Commonwealth countries.

60% of the Commonwealth’s population is under 30.

AT THE LAUNCH OF THE QUEEN’S YOUNG LEADERS PROGRAMME IN JULY

#theroyalselfie
New Zealand’s Aaron Hape is a member of the Programme’s Advisory Panel of young people, which helped select the 2015 Queen’s Young Leaders.

“It was a truly humbling experience to see the kind of work that young people are carrying out across the Commonwealth, and across a diverse range of issues. As a panel member I feel very proud to have been given the opportunity to work with the Programme and be part of selecting the very best from an already amazing pool of talented young people.”
AVOIDABLE BLINDNESS

80% of blindness around the world is avoidable, 90% of cases of blindness occur in low-income countries.

We have joined the global movement to end avoidable blindness. Through our Avoidable Blindness Programme, we are working to combat three major avoidable causes of blindness across the Commonwealth; blinding trachoma, retinopathy of prematurity and diabetic retinopathy, and to strengthen the eye healthcare sector as a whole.

Our four initiatives are:

- BLINDING TRACHOMA
- DIABETIC RETINOPATHY
- RETINOPATHY OF PREMATURITY
- FELLOWSHIPS, RESEARCH & TECHNOLOGY

80% OF BLINDNESS IS AVOIDABLE.
Trachoma has blighted people’s lives across the globe for millennia. It remains the world’s leading infectious cause of blindness. The disease is spread by close contact with an infected person or through transmission by eye-seeking flies.

Repeated infection causes scar tissue to build up and the eyelashes to turn inwards: every blink then aggravates the surface of the eye. Slowly and painfully, sufferers lose their sight.

Children are especially vulnerable to infection and, as their primary carers, two thirds of those affected are women. The Trust’s Trachoma Initiative is working across the Commonwealth - in Africa, the Pacific and Australia – to help put an end to the disease.

By 2019, we want to have eliminated or made significant advances towards eliminating blinding trachoma in 11 Commonwealth countries where it is endemic.

To achieve this, we are supporting expert members from the International Coalition for Trachoma Control to implement the World Health Organisation-approved strategy known as SAFE in our target countries.
In 2014, through our Trachoma Initiative, we started to implement the SAFE Strategy in Africa.

By the end of 2014, the Initiative had:

- Provided surgery to over 16,000 people suffering from trachoma
- Administered antibiotics to almost 5 million people living in high-risk areas
- Introduced a new pilot face washing campaign for school children in Kenya
- Developed plans improving environmental sanitation and hygiene across communities

In 2015, we will extend our Trachoma Initiative to Australia, Fiji, Kiribati, Solomon Islands, Tanzania and Vanuatu.
CASE STUDY: ANNET MWANGULE

Annet, a Village Health Worker from Buyende district, Uganda, supports the Trust’s Trachoma Initiative by teaching members of the surrounding rural communities where she lives about how to prevent the spread of trachoma.

“I have been a Village Health Team (VHT) worker for ten years now. As a VHT I must go to the surrounding villages and teach communities about health education. I travel on my bicycle four or five kilometres every day and knock on peoples’ doors to teach them different health issues. I teach people about eye and face washing, and that people should use soap instead of ash, to have a tip-tap (water tap) near to the latrines, and that they should use rubbish bins and dig holes for latrines. The village voted me to become a VHT. Everyone is very welcoming. They like to hear my advice. I am very happy to be a VHT. I have made lots of friends and it is nice to be part of the community and to help keep everyone healthy.”
Diabetic retinopathy is a complication of diabetes that causes damage to the retina which, if unchecked, can lead to irreversible blindness. In many countries, people are often not aware that they have diabetes or that they could develop diabetic retinopathy, and there is a lack of adequate services within current health systems to screen and tackle this growing condition.

In 2014, we funded the Public Health Foundation of India (PHFI) and the London School of Hygiene and Tropical Medicine to conduct a study into the screening and treatment of diabetic retinopathy in India. The study found that most public-funded diabetes clinics provide no services for diabetic retinopathy. Less than a third of diabetes doctors have basic vision charts in their clinics, and nearly half of patients have lost vision before diabetic retinopathy is diagnosed.

With early detection and treatment of the condition it is possible to reduce the risk of blindness from diabetic retinopathy by 90%. In 2014, we awarded a major grant to PHFI to establish sustainable services for the prevention, detection and treatment of diabetic retinopathy, which will be integrated into the Government of India’s health systems at every level.

In 2015, our Diabetic Retinopathy Initiative will extend to Bangladesh, Pakistan, the Pacific and the Caribbean.

Diabetic retinopathy is a complication of diabetes that causes damage to the retina which, if unchecked, can lead to irreversible blindness. In many countries, people are often not aware that they have diabetes or that they could develop diabetic retinopathy, and there is a lack of adequate services within current health systems to screen and tackle this growing condition.

In 2015, our Diabetic Retinopathy Initiative will extend to Bangladesh, Pakistan, the Pacific and the Caribbean.
CASE STUDY: DR GV MURTHY

Dr Gudlavalleti Murthy, Professor and Director, Indian Institute of Public Health

“The Trust’s support to the programme in India has generated tremendous interest within the Ministry of Health and among the leading eye care institutions in the country. For the first time, the Ministry of Health has set up a National Task Force on diabetic retinopathy which brings together the policy makers, programme managers, eye care and public health professionals on a single platform to guide implementation of activities at the national level which also incorporates the Trust’s support.”
Retinopathy of Prematurity, caused by damage to the retina, is often triggered by the over-administration of oxygen in incubators, infection or poor nutrition in babies born prematurely. As child mortality decreases thanks to improved access to neonatal care, the risk of blindness for preterm infants is increasing. This is due to a lack of awareness in the medical community about retinopathy of prematurity and why it occurs.

In 2013, we supported the first ever National Summit on Retinopathy of Prematurity in Delhi, hosted by the Government of India.

In 2014, we subsequently awarded a major grant to the Public Health Foundation of India to support the development of new nation-wide systems for the prevention, detection and treatment of the disease.

With greater awareness and improved facilities, retinopathy of prematurity is entirely avoidable. The work being developed in India is set to be a scalable model for countries all over the Commonwealth and the globe to follow.

© Clare Gilbert
CASE STUDY: PROFESSOR CLARE GILBERT

Professor Clare Gilbert
Director of the International Centre For Eye Health

“The Trust’s programme is bringing together experts in India who care for preterm infants and who detect and treat those with sight threatening retinopathy of prematurity. This initiative presents a real and unique opportunity for experts to come together and support the Ministry of Health to improve the healthy survival of preterm babies and reduce the number of infants going blind from retinopathy of prematurity.”
We are developing a new generation of trained and expert eye care providers across the Commonwealth.

We funded the establishment of The Commonwealth Eye Health Consortium, formally launched in November 2014, to tap into the expertise that exists across the Commonwealth and deliver a programme of fellowships, research and technology to strengthen eye health systems and eye care throughout the Commonwealth.

It is being co-ordinated by the International Centre for Eye Health at the London School of Hygiene and Tropical Medicine.

The Consortium targets three main issues; people, knowledge and tools.
We are supporting expert institutions from all over the Commonwealth to strengthen capacity to deliver eye care by providing over 100 Masters scholarships in Public Health for Eye Care and clinical fellowships in eye care. This will equip ophthalmologists and eye care managers with the skills and knowledge they need to implement effective, sustainable strategies to prevent and treat blindness.

The Consortium has also established a hospital-based Diabetic Retinopathy Training Network which, at its first workshop in November 2014, brought together eye care professionals, diabetologists and officials from Ministries of Health from eight Commonwealth countries. The Network aims to develop national strategies to tackle diabetic retinopathy and is designed to enable participants to share their experience and knowledge. It is increasingly attracting countries from outside the Commonwealth who are keen to participate in the network at their own expense.

“We are very grateful to The Queen Elizabeth Diamond Jubilee Trust for its support towards eye care and the elimination of avoidable blindness in the Commonwealth. The African saying is “How do you eat an elephant?” to which the answer is “one mouthful at a time, piece by piece, and with a lot of help from your friends.”

Colin Cook, Head of the Division of Ophthalmology of the University of Cape Town, South Africa
**B KNOWLEDGE**

We want to deepen understanding about avoidable blindness and the approaches to tackling it through research fellowships.

To build eye research capacity across the Commonwealth we are providing clinical research fellowships at PhD and postdoctoral levels.

**C TOOLS**

We are supporting the development and roll out of new technology to help advance eye health such as the Portable Eye Examination Kit (Peek) which identifies vision and eye problems in any setting using only a smartphone.

As a multifunctional, low-cost device that manages and monitors the treatment of patients via a smartphone, Peek aims to empower eye health workers to diagnose eye diseases, even in the remotest of settings.

---

**EYE HEALTH ON THE GLOBAL SCIENTIFIC AGENDA**

Organised by the Royal Society, in November 2014 we joined the Government of India in supporting the Commonwealth Science Conference, the first such event for nearly 50 years. The Conference was attended by 300 specially invited scientists and 70 PhD students from over 30 Commonwealth countries. The four day event saw presentations from leading scientists on cutting-edge research from across the Commonwealth. Professor Clare Gilbert, from the International Centre for Eye Health, who advises us on our Avoidable Blindness Programme, presented and led the discussion on eye health.
“GOOD NEWS FOR DEVELOPING COUNTRIES. CURING BLINDNESS IS GOING MOBILE”
@BILLGATES IN AUGUST 2014 UPON LEARNING ABOUT PEEK
CASE STUDY: DR ANDREW BASTAWROUS

Ophthalmologist and Peek's co-founder Dr Andrew Bastawrous, from the London School of Hygiene and Tropical Medicine, explains their invention:

“Peek (the Portable Eye Examination Kit) is a unique smartphone-based system for comprehensive eye testing anywhere in the world. The majority of blind people worldwide live in low-income countries, in hard to reach locations, often far from hospital services and with limited access to electricity. Peek enables a single healthcare worker to provide an eye test, share information remotely with experts and ensure that the examined patient is linked to care by using GPS and SMS services. We are really grateful that the Trust is making it possible to make this a reality.”
The Trust has received generous support from a wide range of donors across the Commonwealth and beyond including governments, foundations, companies, private trusts and individuals. The UK Government committed to match up to £50 million of donations. The Trust received the full £50 million and is now operating on a budget of over £100 million. Up to December 2014 the Trust committed the following in grants:
Partnerships help us to achieve our goals, and partnerships with Commonwealth governments are the cornerstone of our work.

We take advice from and carry out our work in alliance with experts from all over the Commonwealth.

The following partners have been fundamental to the realisation of our work since 2012:
